

VibTernative

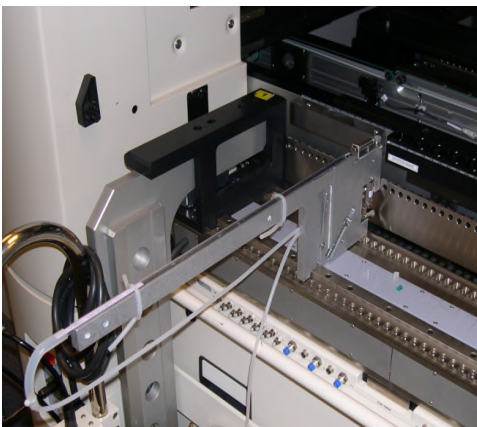

The engineered alternative to vibratory feeders in SMT.

- Individual Feeder per Part Number
- No un-necessary loss of carriage space
- Consistent and reliable parts feeding
- No loss of production through missing parts.
- No stoppages to clear stacked parts

- Pneumatic actuation via Mechanical or Electronic trigger.
- Precision location for easy set up
- Tubes can be changed on the fly.

- Various widths to accommodate various stick dimensions.
- Immediate increase in machine uptime
- Adaptable to any Pick and Place machine.

The Vibternative feeder is simple, smart and reliable, it instantly increases feeder carriage utilization. Its consistency comes from being horizontal so parts don't "stack" at the pick pocket.
